LIST OF D. P. W. SUBJECTS.

TUMKUR DISTRICT.

Subject and speaker.	Summary of discussion.	Reply of Govt.
Subject No. 353 Necessity for the restoration of the sluice at Nademavinapurada ane. Mr. Amrutur Shamaiyengar of Kunigal Taluk.	(*a*) Holagonda is the first of a series of 8 tanks on which depend the lands of 30 villages yielding a revenue of Rs. 12,000. The only feeder for the whole series is the Gavani channel from the Kaggere Dam across the Kodihalla of the Kunigal tank. Higher up this dam, there is the Nademavinapurada *ane* in which a sluice had been opened for conveying water to Kaggere *ane*. Some years back the Nademavinapurada channel was not only deepened but the said sluice was closed by certain contractors who happened to hold land under Nademavinapurada *ane*, thus diminishing the supply of water to the Kaggere *ane*. Under these circumstances the restoration of the old sluice in the Nademavinapurada *ane* may be ordered.	D. P. W. will expedite the disposal of this question in communication with the Deputy Commissioner.
	(*b*) The Gavani channel is silted up with sand and has to be repaired.	
Subject No. 354 Construction of a dam across a jungle stream near Kempanahalli to feed the Depambudi Tank. Mr. Nanjundaiya and Mr. Sivaramaiya of Kunigal Taluk.	At a distance of 4 miles from Huliyurdurg there is the large tank of Depambudi with a beriz of Rs. 5,000. There are two minor tanks depending upon it, the total beriz of which comes up to Rs. 1,500. The tank does not get a sufficient supply of water at present, the feeder channel not being in good order. At a distance of 5 miles from this tank there is near Kempanahalli in the Byadarahalli sammath a big jungle stream with a good catchment. It runs close to the village of Malur and empties itself into the Arkavati river near Kankanhalli. A *masonry* dam across this stream near Kempanahalli and a channel only a mile long will help to supply the Depambudi tank with a constant and sufficient supply of water. The cost of the project is not likely ot exceed Rs. 2,000.	Referred to P. W. D. for investigation.
Subject No. 355 The construction of a tank on Survey No. 69 near Byadarahalli. Mr. Nanjundaiya and Mr. Sivaramaiya of Kunigal Taluk.	The construction of a tank in land Survey No. 69 of the Byadarahalli village at a small cost of Rs. 2,000 or Rs. 3,000 will enable a large supply of water being stored and nearly 400 acres of land brought under cultivation.	Referred to P. W. D.
